Ex.No:5	Experiments on Packet capture tool : Wireshark
10.8.26	

Aim:

To understand the features of wireshark as a packet capture tool and understand encapsulation of information at various layers of a Protocol stack.

Procedure:

* Select Local Area Connection in Wireshark.
* Go to capture option
* Select stop capture automatically after 100 packets.
* Then click start capture
* Save the packets.

* Create a filter to display only TCP/UDP packets.

Procedure:

* Select local area connection in Wireshark
* Go to Capture Option.
* Select stop capture automatically after 100 packets.
* Then click start capture.

*To see flow graph click statistics flow graph.

*Save the packets.

* Create a filter to display only DNS packets and provide the flow graph.

* Create a filta to display only IP / ICMP packets and inspect the packets.

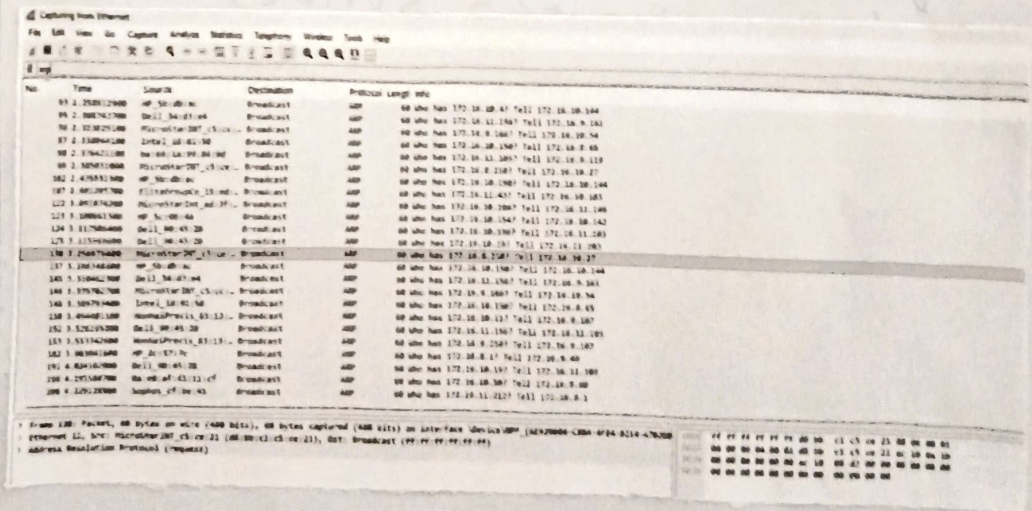

*. Create a filter to display only ARP packets and inspect packets.

*Go to capture option

*Select stop capture automatically after 100 packets.

*Start capture and search ARP packets in search bar.

*Save the packets.

Result:

Thus, the different network protocols were successfully captured, filtered and analysed using wireshark.
